MSU Ayershire Emperor Augustus	2010	Dog	Ayershire Msu's PhD	Ayershire Msu's Data Entry	Started seizing around 7 months, yelping, running and acting like he was being bitten on his hindquarters. He progressed to gran mal seizures in a few months and then cluster seizures. Was on multiple anti-epileptic drugs to control the seizures. Spinal fluid analysis, CT scan of brain and blood tests for distemper, toxoplasma and neospora were all negative. Became unable to take phenobarbital as it suppressed his immune system. Potassium bromide didn't control his seizures. Put down due to uncontrollable cluster seizures at 20 months of age in July 2012.	Owner	USA	
MSU's Zachary Wee-Man Morris Zemke	2010	Dog	Ayershire Msu's PhD	Ayershire Msu's Data Entry	First seizure November 2014 at the age of 4 years. The first one was grand mal seizure early in the morning. We were put on medicine for 10 days, he was fine throughout that period, so we stopped medicine. Later on he had another small seizure, and we decided to put him on medicine. During the phenobarbital medication only one more small one.	Owner	USA	
Myosotisis Fiyero	2012	Dog	Kelsmere Kardamon	Myosotisis Wickle Muskmallow	First seizure was in February 2018. Dog collapsed, cramped and was unconcious for some minutes. Second seizure in May 2018. Until now no other seizures and no medication.	Breeder	the Netherlands	3.8.2015
